

# Predict360™ Safety Management System

**Reduce Operational Risk and Increase Performance by building a Safety Management Process.**

## The Challenges

Health, safety, environment and quality play an important role in any corporate setting. Keeping employees safe is of utmost importance to a successful business plan. There are multiple regulations and standards that need to be considered when putting in place an effective HSEQ policy. It is inevitable that some of these regulations and standards will change. In order to be audit-ready, HSEQ policies need to be all-encompassing.

In health and safety, ensuring an engaged workforce is critical. With employees embracing corporate health and safety objectives as their own, creating a safety culture with workforce participation.

## Our Solution

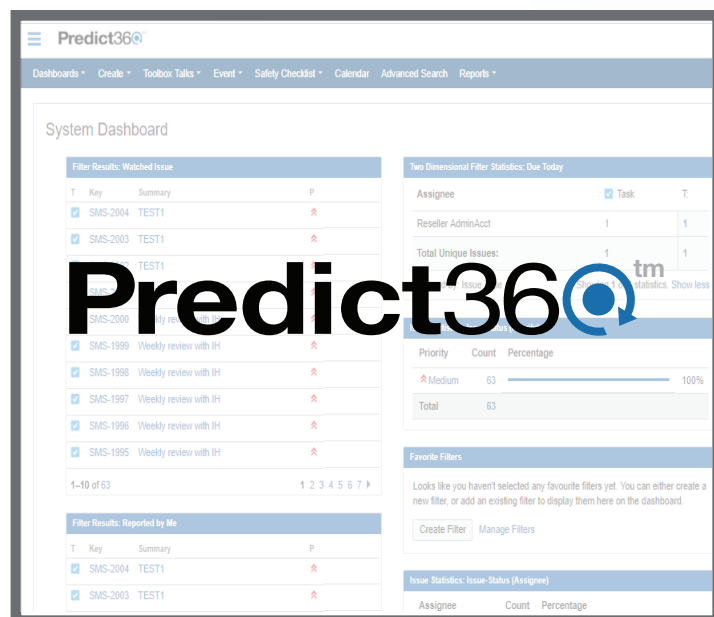

Predict360™ Safety Management Software streamlines health and safety processes and best practices to effectively manage all aspects of your organization's safety program with incident and regulatory reporting. It enables organizations to collect, store, track, and collaborate on safety compliance-related incidents. It has a built-in investigation feature that is tied back to the incident, streamlining your Corrective and Preventative Actions (CAPA).

## Key Features

Launches a corrective and preventive action plan based on outcomes of a case, audit, risk assessment, survey or incident so you can address the root cause and not just the symptoms of the issues facing your organization. The system recommends the rollout of corrective and preventative actions through:

- Training
- Incident/investigation/case management

Risk-based audit capability which provides a comprehensive audit to evaluate compliance with the requirements to identify gap areas in which safety and environmental performance needs to be improved.
